Software Tools and Technologies Lab II

Assignment 2

Group Members: Ahire Sandesh Naval, Dandge Sanket Rajendra, Karan Sunil Kumbhar

Question Number 5
Find out the usage of git commit –amend other than the one discussed in class. Now show one example each of both the usages of amend with respective git graphs.
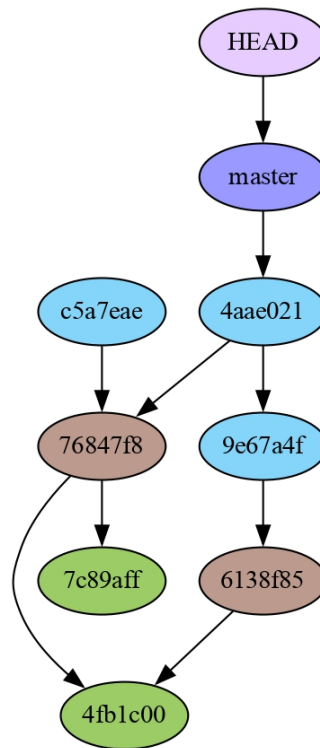

Ans:
The usage of git commit –amend is for:

- Changing the commit message using git commit –amend

Here, first one commit is made with a commit message. But if the user think that we wants to change the commit message without making another commit so they use git commit –amend.

- Splitting one commit into two commits using git commit –amend

Here, first two files are made and committed into one commit. But now we think that we want to commit them into two commit adding one file each at a time. So we can split the one commit into two commits by using git commit –amend.
